Music BoomBoxd

GIT Repository Link: https://git.fhict.nl/I540927/music-boomboxd.git

What is the purpose of the application?

- This application will help you find more latest music and friends who like the same genres.
- Users can write and read reviews of any song, album, or artist on the application.
- Users will be able to fill out a form on the website where they will be able to recommend songs, albums, and artists that they would like to be added to the website.
    - The form will be sent to me, and I will be able to review their account and decide if I should add the songs, albums, or artists they have requested.

How will users interact with each other?

- Users will be able to like comment and report comments on each other's reviews.
    - I would like to allow users to send music recommendations to each other but only if both parties want this. I would like to create a setting for the user to decide whether they want to receive messages from others.
- Users will be able to select their 5 favorite albums and 5 favorite songs to display them in their user profile. I want to make the profiles customizable so that it is easier to find their friends.
- I want to create a chat for different genres of music so that users would be able to communicate with each other and find like-minded people.

What will be the content?

- The app will show you the most recent and upcoming albums.
    - You will be able to set a notification for when a new album or song comes out.
- I would like to allow users to adjust their preferences for new and upcoming music in the settings, including genre and seasonal preferences so that the music displayed on the main page is tailored to their liking.
    - For example, Christmas songs during the winter season.
- There will also be a section for the most popular albums and artists that will be selected by the number of comments and likes under an album or artist.
- The users will be divided into three categories:
    - Professionals,
    - Amateurs,
    - Artists.
- Thanks to this, users will be able to see the relevance of people's comments under songs and albums. The Professionals and Artists users would have more access than the amateurs' basic users.
    - I would like to make the comments from the users with more access to be pushed out and displayed first over the basic user's comments.
- I would like to make the main page different for logged-in users and non-logged-in users.
- You will be able to search for different songs, albums, or artists so that you can review and rate them.
    - I would like to also make it searchable by categories like:
        - Year,
        - Genre,
        - Popularity,
